Second Year with Effect from AY 2020-21

Third Year with Effect from AY 2021-22

Final Year with Effect from AY 2022-23

(REV-2019 'C' Scheme) from Academic Year 2019 – 20

Under

# FACULTY OF SCIENCE & TECHNOLOGY

(As per AICTE guidelines with effect from the academic year 2019–2020)

## Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty resolved that course objectives and course outcomes are to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. Choice based Credit and grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 12-13 weeks and remaining 2-3 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

There was a concern that the earlier revised curriculum more focused on providing information and knowledge across various domains of the said program, which led to heavily loading of students in terms of direct contact hours. In this regard, faculty of science and technology resolved that to minimize the burden of contact hours, total credits of entire program will be of 170, wherein focus is not only on providing knowledge but also on building skills, attitude and self learning. Therefore in the present curriculum skill based laboratories and mini projects are made mandatory across all disciplines of engineering in second and third year of programs, which will definitely facilitate self learning of students. The overall credits and approach of curriculum proposed in the present revision is in line with AICTE model curriculum.

The present curriculum will be implemented for Second Year of Engineering from the academic year 2020-21. Subsequently this will be carried forward for Third Year and Final Year Engineering in the academic years 2021-22, 2022-23, respectively.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology Member, Academic Council, RRC in Engineering University of Mumbai

# Incorporation and implementation of Online Contents from <u>NPTEL/ Swayam Platform</u>

The curriculum revision is mainly focused on knowledge component, skill based activities and project based activities. Self learning opportunities are provided to learners. In the revision process this time in particular Revised syllabus of 'C ' scheme wherever possible additional resource links of platforms such as NPTEL, Swayam are appropriately provided. In an earlier revision of curriculum in the year 2012 and 2016 in Revised scheme 'A' and 'B' respectively, efforts were made to use online contents more appropriately as additional learning materials to enhance learning of students.

In the current revision based on the recommendation of AICTE model curriculum overall credits are reduced to 171, to provide opportunity of self learning to learner. Learners are now getting sufficient time for self learning either through online courses or additional projects for enhancing their knowledge and skill sets.

The Principals/ HoD's/ Faculties of all the institute are required to motivate and encourage learners to use additional online resources available on platforms such as NPTEL/ Swayam. Learners can be advised to take up online courses, on successful completion they are required to submit certification for the same. This will definitely help learners to facilitate their enhanced learning based on their interest.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology Member, Academic Council, RRC in Engineering University of Mumbai

# Preamble

It is our honor and a privilege to present the Rev-2019 'C' scheme syllabus of Bachelor of Engineering in Information Technology (effective from year 2019-20) with inclusion of cutting edge technology. Information Technology is comparatively a young branch among other engineering disciplines in the University of Mumbai. It is evident from the placement statistics of various colleges affiliated to the University of Mumbai that IT branch has taken the lead in the placement.

The branch also provides multi-faceted scope like better placement and promotion of entrepreneurship culture among students, and increased Industry Institute Interactions. Industries views are considered as stakeholders will design of the syllabus of Information Technology. As per Industries views only 16 % graduates are directly employable. One of the reasons is a syllabus which is not in line with the latest technologies. Our team of faculties has tried to include all the latest technologies in the syllabus. Also first time we are giving skill-based labs and Mini-project to students from third semester onwards which will help students to work on latest IT technologies. Also the first time we are giving the choice of elective from fifth semester such that students will be master in one of the IT domain. The syllabus is peer reviewed by experts from reputed industries and as per their suggestions it covers future trends in IT technology and research opportunities available due to these trends.

We would like to thank senior faculties of IT department of all colleges affiliated to University of Mumbai for significant contribution in framing the syllabus. Also on behalf of all faculties we thank all the industry experts for their valuable feedback and suggestions. We sincerely hope that the revised syllabus will help all graduate engineers to face the future challenges in the field of information and technology

### Program Specific Outcome for graduate Program in Information Technology

- 1. Apply Core Information Technology knowledge to develop stable and secure IT system.
- 2. Design, IT infrastructures for an enterprise using concepts of best practices in information Technology and security domain.
- 3. Ability to work in multidisciplinary projects and make it IT enabled.
- 4. Ability to adapt latest trends and technologies like Analytics, Blockchain, Cloud, Data science.

# **Course Objectives:**

Sr. No.	Course Objectives
The cour	rse aims:
1	To learn the Laplace Transform, Inverse Laplace Transform of various functions, its
	applications.
2	To understand the concept of Fourier Series, its complex form and enhance the problem
	solving skills.
3	To understand the concept of complex variables, C-R equations with applications.
4	The fundamental knowledge of Trees, Graphs etc.
5	To understand the basic techniques of statistics like correlation, regression, and curve
	fitting for data analysis, Machine learning, and AI.
6	To understand some advanced topics of probability, random variables with their
	distributions and expectations.

## **Course Outcomes:**

Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
ccessful completion, of course, learner/student will be able to:	
Understand the concept of Laplace transform and its application to solve the real integrals in engineering problems.	L1, L2
Understand the concept of inverse Laplace transform of various functions and its applications in engineering problems.	L1, L2
Expand the periodic function by using the Fourier series for real-life problems and complex engineering problems.	L1, L2, L3
Understand complex variable theory, application of harmonic conjugate to get orthogonal trajectories and analytic functions.	L1, L2, L3
Apply the concept of Correlation and Regression to the engineering problems in data science, machine learning, and AI.	L2, L3
Understand the concepts of probability and expectation for getting the spread of the data and distribution of probabilities.	L1, L2
	<ul> <li>ccessful completion, of course, learner/student will be able to:</li> <li>Understand the concept of Laplace transform and its application to solve the real integrals in engineering problems.</li> <li>Understand the concept of inverse Laplace transform of various functions and its applications in engineering problems.</li> <li>Expand the periodic function by using the Fourier series for real-life problems and complex engineering problems.</li> <li>Understand complex variable theory, application of harmonic conjugate to get orthogonal trajectories and analytic functions.</li> <li>Apply the concept of Correlation and Regression to the engineering problems in data science, machine learning, and AI.</li> <li>Understand the concepts of probability and expectation for getting the spread</li> </ul>

Module	Detailed Contents	Hours	CO Mapping
	<ul> <li>Module: Laplace Transform</li> <li>1.1 Definition of Laplace transform, Condition of Existence of Laplace transform.</li> <li>1.2 Laplace Transform (L) of standard functions like e<sup>at</sup>, sin(at), cos(at), sinh(at), cosh(at) and t<sup>n</sup>, n ≥ 0.</li> <li>1.3 Properties of Laplace Transform: Linearity, First Shifting Theorem, Second Shifting Theorem, Change of Scale, Multiplication by t, Division by t, Laplace Transform of derivatives and integrals (Properties without proof).</li> <li>1.4 Evaluation of real improper integrals by using Laplace Transformation.</li> <li>Self-learning Topics:Laplace Transform: Periodic functions, Heaviside's Unit Step function, Dirac Delta Function , Special functions (Error and Bessel)</li> </ul>	6	CO1
02	<ul> <li>Module: Inverse Laplace Transform</li> <li>2.1 Definition of Inverse Laplace Transform, Linearity property, Inverse Laplace Transform of standard functions, Inverse Laplace transform using derivatives.</li> <li>2.2 Partial fractions method to find Inverse Laplace transform.</li> <li>2.3 Inverse Laplace transform using Convolution theorem (without proof)</li> <li>Self-learning Topics: Applications to solve initial and boundary value problems involving ordinary differential equations.</li> </ul>	6	CO1, CO2
03	Module: Fourier Series: 3.1 Dirichlet's conditions, Definition of Fourier series and Parseval's Identity (without proof). 3.2 Fourier series of periodic function with period 2 and 2 <i>l</i> . 3.3 Fourier series of even and odd functions. 3.4 Half range Sine and Cosine Series.	6	CO3

	<b>Self-learning Topics:</b> Orthogonal and orthonormal set of functions, Complex form of Fourier Series, Fourier Transforms.		
			<u> </u>
	Module: Complex Variables:		CO4
	4.1 Function $f(z)$ of complex variable, Limit, Continuity and		
	Differentiability of		
	f(z), Analytic function: Necessary and sufficient conditions for $f(z)$ to be		
	analytic (without proof).		
04	4.2 Cauchy-Riemann equations in Cartesian coordinates (without proof).	6	
04	4.3 Milne-Thomson method: Determine analytic function $f(z)$ when real	0	
	part (u), imaginary part (v) or its combination $(u+v/u-v)$ is given.		
	4.4 Harmonic function, Harmonic conjugate and Orthogonal trajectories.		
	4.4 Harmonie function, Harmonie conjugate and Orthogonal trajectories.		
	Self-learning Topics: Conformal mapping, Linear and Bilinear mappings,		
	cross ratio, fixed points and standard transformations.		
	Module: Statistical Techniques		CO5
	5.1 Karl Pearson's coefficient of correlation (r)		000
	5.2 Spearman's Rank correlation coefficient (R) (with repeated and non-		
~ <b>-</b>	repeated ranks)		
05	5.3 Lines of regression	6	
	5.4 Fitting of first and second degree curves.		
05			
	Self-learning Topics: Covariance, fitting of exponential curve.		
	Module: Probability		COé
	6.1 Definition and basics of probability, conditional probability.		
	6.2 Total Probability theorem and Bayes' theorem.		
	6.3 Discrete and continuous random variable with probability distribution		
06	and probability density function.	6	
	6.4 Expectation, Variance, Moment generating function, Raw and central		
	moments up to 4 <sup>th</sup> order.		
	Self-learning Topics: Skewness and Kurtosis of distribution (data).

#### Term Work:

General Instructions:

- 1. Batch wise tutorials have to be conducted. The number of students per batch will be as per University pattern for practicals.
- 2. Students must be encouraged to write at least 6 class tutorials on the entire syllabus.
- 3. A group of 4-6 students should be assigned a self-learning topic. Students should prepare a presentation/problem solving of 10-15 minutes. This will be considered as a mini project in Engineering Mathematics. This project will be graded out of 10 marks depending on the performance of the students.

The distribution of Term Work marks will be as follows -

1.	Attendance (Theory and Tutorial)	05 marks
2.	Class Tutorials on entire syllabus	10 marks
3.	Mini project	10 marks

#### Assessment:

#### Internal Assessment (IA) for 20 marks:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

### > Question paper format

- The question paper will comprise a total of 6 questions, each carrying 20 marks.
- Out of the 6 questions, 4 questions have to be attempted.
- Question 1, based on the entire syllabus, will have 4 sub-questions of 5 marks each and is compulsory.
- Question 2 to Question 6 will have 3 sub-questions, each of 6, 6, and 8 marks, respectively.
- Each sub-question in (4) will be from different modules of the syllabus.
- Weight age of each module will be proportional to the number of lecture hours, as mentioned in the syllabus.

Course Objectives:								

a N						
Sr. No.	Course Objectives					
The cour	rse aims:					
1	To learn the basics and understand the need of database management system.					
2	To construct conceptual data model for real world applications					
3	To Build Relational Model from ER/EER.					
4	To introduce the concept of SQL to store and retrieve data efficiently.					
5	To demonstrate notions of normalization for database design.					
6	To understand the concepts of transaction processing- concurrency control & recovery procedures.					

# **Course Outcomes:**

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On su	ccessful completion, of course, learner/student will be able to:	
1	Identify the need of Database Management System.	L1, L2
2	Design conceptual model for real life applications.	L6
3	Create Relational Model for real life applications	L6
4	Formulate query using SQL commands.	L3
5	Apply the concept of normalization to relational database design.	L3
6	Demonstrate the concept of transaction, concurrency and recovery.	L2

## **Prerequisite:** C Programming

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	<b>Comment</b> Basic knowledge of operating systems and file systems, Any programming	02	
Ι	Database System Concepts and Architecture	Introduction, Characteristics of Databases, File system v/s Database system, Data abstraction and Data Independence, DBMS system architecture, Database Administrator (DBA), Role of DBA <b>Self-learning Topics:</b> Identify the types of Databases.	05	CO1
II	The Entity- Relationship Model	Conceptual Modeling of a database, The Entity- Relationship (ER) Model, Entity Type, Entity Sets, Attributes and Keys, Relationship Types, Relationship Sets, Weak entity Types Generalization, Specialization and Aggregation, Extended Entity-Relationship (EER) Model. Self-learning Topics: Design an ER model for any real time case study.	05	CO2
III	Relational Model & Relational Algebra	Introduction to Relational Model, Relational Model Constraints and Relational Database Schemas, Concept of Keys: Primary Kay, Secondary key, Foreign Key, Mapping the ER and EER Model to the Relational Model, Introduction to Relational Algebra, Relational Algebra expressions for Unary Relational Operations, • Set Theory operations, • Binary Relational operation Relational Algebra Queries <b>Self-learning Topics:</b> Map the ER model designed in module II to relational schema	05	CO3
IV	Structured Query Language (SQL) & Indexing	Overview of SQL, Data Definition Commands, Set operations, aggregate function, null values, Data Manipulation commands, Data Control commands, Complex Retrieval Queries using Group By, Recursive Queries, nested Queries ; Integrity constraints in SQL. Database Programming with JDBC, Security and authorization: Grant & Revoke in SQL Functions and Procedures in SQL and cursors. Indexing:Basic Concepts, Ordered Indices, Index Definition in SQL <b>Self-learning Topics:</b> Physical design of database for the relational model designed in module III and fire various queries.	08	CO4

V	Dalational	Design guidelings for relational Calence	07	005
V	Relational	Design guidelines for relational Schema,	07	CO5
	Database Design	Functional Dependencies, Database tables and		
		normalization, The need for normalization, The		
		normalization process, Improving the design,		
		Definition of Normal Forms- 1NF, 2NF, 3NF &		
		The Boyce-Codd Normal Form (BCNF).		
		Self-learning Topics: Consider any real time		
		application and normalization upto 3NF/BCNF		
VI	Transactions	Transaction:	07	CO6
	Management and	Transaction concept, State Diagram, ACID		
	<b>Concurrency and</b>	Properties, Transaction Control Commands,		
	Recovery	Concurrent Executions, Serializability – Conflict		
	-	and View,		
		Concurrency Control:		
		Lock-based-protocols, Deadlock handling		
		Timestamp-based protocols,		
		Recovery System:		
		Recovery Concepts, Log based recovery.		
		Self-learning Topics: Study the various deadlock		
		situation which may occur for a database designed		
		in module V.		¢

# **Course Objectives:**

Course (	Objectives:						
Sr. No.	Course Objectives						
The cour	se aims:						
1	Study the basic of Analog and Digital Communication Systems.						
2	Describe the concept of Noise and Fourier Transform for analyzing communication systems.						
3	Acquire the knowledge of different modulation techniques such as AM, FM and study the block diagram of transmitter and receiver.						
4	Study the Sampling theorem and Pulse Analog and digital modulation techniques						
5	Learn the concept of multiplexing and digital band pass modulation techniques						
6	Gain the core idea of electromagnetic radiation and propagation of waves.						

# **Course Outcomes:**

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On su	accessful completion, of course, learner/student will be able to:	
1	Describe analog and digital communication systems	L1
2	Differentiate types of noise, analyses the Fourier transform of time and frequency domain.	L1, L2, L3, L4
3	Design transmitter and receiver of AM, DSB, SSB and FM.	L2,L3
4	Describe Sampling theorem and pulse modulation systems.	L1
5	Explain multiplexing and digital band pass modulation techniques.	L1, L2
6	Describe electromagnetic radiation and propagation of waves.	L1

## Prerequisite: Basic of electrical engineering

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Terminologies in communication systems, analog and digital electronics	02	
Ι	Introduction	Basics of analog communication and digital communication systems (Block diagram), Electromagnetic Spectrum and application, Types of Communication channels. Self-learning Topics: Difference between Analog and Digital Communication. List the examples.	03	CO1
II	Noise and Fourier Representation of Signal and System	Basics of signal representation and analyses, Introduction to Fourier Transform, its properties (time and frequency shifting, Fourier transform of unit step, delta and gate function. Types of Noise, Noise parameters –Signal to noise ratio, Noise factor, Noise figure, Friss formula and Equivalent noise temperature. Self-learning Topics: Practice Numerical on above topic.	06	CO2
ш	Amplitude and Angle modulation Techniques.	Need for modulation, Amplitude Modulation Techniques: DSBFC AM,DSBSC-AM, SSB SC AM- block diagram spectrum, waveforms, bandwidth, Power calculations. Generation of AM using Diode, generation of DSB using Balanced modulator, Generation of SSB using Phase Shift Method. AM Transmitter (Block Diagram) AM Receivers – Block diagram of TRF receivers and Super heterodyne receiver and its characteristics- Sensitivity, Selectivity, Fidelity, Image frequency and its rejection and double spotting Angle Modulation FM: Principle of FM- waveforms, spectrum, bandwidth. Pre- emphasis and de-emphasis in FM, FM generation: Direct method –Varactor diode Modulator, Indirect method (Armstrong method) block diagram and waveforms. FM demodulator: Foster Seeley discriminator, Ratio detector. Self-learning Topics: Define AM and FM. Differentiate between FM and AM. List examples of FM and AM.	12	CO1, CO2, CO3
IV	Pulse Analog Modulation and Digital Modulation	Sampling theorem for low pass and band pass signals with proof, Anti- aliasing filter, PAM, PWM and PPM generation and Degeneration. Quantization process, Pulse code modulation, Delta modulation, Adaptive delta modulation.	08	CO1, CO2, CO4

		Introduction to Line Codes and ISI.		
		Self-learning Topics: Implementation of Pulse code		
		modulation and demodulation.		
$\mathbf{V}$	Multiplexing and	Principle of Time Division Multiplexing, Frequency	04	CO1,
	<b>Digital Band Pass</b>	Division Multiplexing, Orthogonal Frequency		CO2,
	Modulation	Division Multiplexing and its applications .ASK,		CO5
	Techniques	FSK, PSK QPSK Generation and detection.		
		Self-learning Topics: Implement TDM, FDM,		
		OFDM.		
VI	Radiation and	Electromagnetic radiation, fundamentals, types of	04	CO6
	Propagation of	propagation, ground wave, sky wave, space wave		
	Waves	tropospheric scatter propagation		
		<b>Self-learning Topics:</b> List the real time examples for		
		different types of propagation waves.

Course Objectives:									

# **Course Objectives:**

Sr. No.	Course Objectives
The cour	se aims:
1	To introduce various programming paradigms and the basic constructs that underline any programming language.
2	To understand data abstraction and object orientation.
3	To introduce the basic concepts of declarative programming paradigms through functional and logic programming.
4	To design solutions using declarative programming paradigms through functional and logic programming.
5	To introduce the concepts of concurrent program execution.
6	To understand use of scripting language for different problem domains.

#### **Course Outcomes:**

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On suc	ccessful completion, of course, learner/student will be able to:	
1	Understand and Compare different programming paradigms.	L1, L2
2	Understand the Object Oriented Constructs and use them in program design.	L1, L2
3	Understand the concepts of declarative programming paradigms through functional and logic programming.	L1, <b>L2</b>
4	Design and Develop programs based on declarative programming paradigm using functional and/or logic programming.	L5, L6
5	Understand role of concurrency in parallel and distributed programming.	L1, L2
6	Understand different application domains for use of scripting languages.	L1. L2

١

Prerequisite: Students must have learned C Programming (FEC205 and FEL204), DETAILED SVI LABUS.

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Compilation and interpretation Focus on overview of compilation steps.	02	CO1
I	Introduction to Programming Paradigms and Core Language Design Issues	Introduction to different programming paradigms. Names, Scopes, and Bindings, Scope Rules, Storage Management. Type Systems, Type Checking, Equality Testing and Assignment. Subroutine and Control Abstraction: Stack Layout, Calling sequence, parameter passing Generic subroutines and modules. Exception handling, Co-routines and Events. Self-learning Topics: Implementation of basic concepts using any programming language.	10	CO1
Π	Imperative Paradigm: Data Abstraction in Object Orientation	<ul> <li>Grouping of data and Operations- Encapsulation,</li> <li>Overloading, Polymorphism, Inheritance, Initialization and Finalization, Dynamic Binding.</li> <li>Self-learning Topics: Implementation of OOP concepts using OOP language.</li> </ul>	05	CO2
III	Declarative Programming Paradigm: Functional Programming	Introduction to Lambda Calculus, Functional Programming Concepts, Evaluation order, Higher order functions, I/O- Streams and Monads. Self-learning Topics: Implementation of I/O using any programming language.	07	CO3, CO4
IV	Declarative Programming Paradigm: Logic	Logic Programming with PROLOG - Resolution and Unification, Lists, Arithmetic execution order, imperative control flow, database manipulation,	06	CO3, CO4

	Programming	PROLOG facilities and deficiencies Self-learning Topics: Implementation of basic operation and control flow using PROLOG in healthcare.		
V	Alternative Paradigms: Concurrency	Concurrent Programming Fundamentals, Implementing synchronization, Message Passing - Background and Motivation, Multi threaded programs, Communication and Synchronization, Language and Libraries, Thread creation Syntax	04	CO5
		<b>Self-learning Topics:</b> Implementation of module IV concepts for real time application.		
VI	Alternative Paradigms: Scripting Languages	Common characteristics, Different Problem domains for using scripting,Use of scripting in Web development–server and clients side scripting, Innovative features of scripting languages - Names and Scopes, string and pattern manipulation ,data types ,object orientation.	05	CO6
		Self-learning Topics: Implement a simple website for client-server.

## Lab Objectives:

Sr. No.	Lab Objectives
The Lab	experiments aims:
1	To use data structures as the introductory foundation for computer automation to engineering problems.
2	To use the basic principles of programming as applied to complex data structures.
3	To learn the principles of stack, queue, linked lists and its various operations.
4	To learn fundamentals of binary search tree, implementation and use of advanced tree like AVL, B trees and graphs.
5	To learn about searching, hashing and sorting.
6	To learn the applications of linked lists, stacks, queues, trees and graphs.

# Lab Outcomes:

Lab Outcomes:							
Sr. No.	Lab Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy					
On succ	essful completion, of course, learner/student will be able to:						
1	Understand and use the basic concepts and principles of various linked lists, stacks and queues.	L1, L2, L3					
2	Understand the concepts and apply the methods in basic trees.	L1, L2					
3	Use and identify the methods in advanced trees.	L3, L4					
4	Understand the concepts and apply the methods in graphs.	L2, L3					
5	Understand the concepts and apply the techniques of searching, hashing and sorting	L2, L3					
6	Illustrate and examine the methods of linked lists, stacks, queues, trees and	L3, L4					

## **Prerequisite:** C Programming

## Hardware & Software Requirements:

Hardware Requirement:	Software requirement:				
PC i3 processor and above	Turbo/Borland C complier				

	1			
Sr. No.	Module	Detailed Content	Hours	LO Mapping

## Lab Objectives:

Sr. No.	Lab Objectives
The Lab	experiments aims:
1	To identify and define problem statements for real life applications
2	To construct conceptual data model for real life applications
3	To Build Relational Model from ER/EER and demonstrate usage of relational algebra.
4	To Apply SQL to store and retrieve data efficiently
5	To implement database connectivity using JDBC
6	To understand the concepts of transaction processing- concurrency control & recovery procedures.

# Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive levels of attainment as per Bloom's
<u>()</u>	agassful completion of course learner/student will be able to:	Taxonomy
1	accessful completion, of course, learner/student will be able to:         Define problem statement and Construct the conceptual model for real life application.	L1, L3, L4, L6
2	Create and populate a RDBMS using SQL.	L3, L4
3	Formulate and write SQL queries for efficient information retrieval	L3, L4
4	Apply view, triggers and procedures to demonstrate specific event handling.	L1, L3, L4
5	Demonstrate database connectivity using JDBC.	L3
6	Demonstrate the concept of concurrent transactions.	L3, L4

#### Hardware & Software Requirements:

Hardware Requirement:	Software requirement:
PC i3 processor and above	Any SQL Compiler, Java Programming Language

#### **DETAILED SYLLABUS:**

Sr. No.	Detailed Content	Hours	LO Mapping
1.	Identify real world problem and develop the problem statement. Design a Entity-Relationship (ER) / Extended Entity-Relationship (EER) Model.	n 02	LO1
2.	Mapping ER/EER to Relational schema model.	02	LO1
3.	Create a database using DDL and apply integrity constraints.	02	LO2, LO3
4.	Perform data manipulations operations on populated database.	02	LO3
5.	Perform Authorization using Grant and Revoke.	02	LO2, LO3
6.	Implement Basic and complex SQL queries.	02	LO3, LO4
7.	Implementation of Views and Triggers.	02	LO4
8.	Demonstrate database connectivity using JDBC.	02	LO5
9.	Execute TCL commands.	02	LO4
10.	Implement functions and procedures in SQL	02	LO3, LO4
11.	Implementation of Cursor.	02	LO3, LO4
-12.	Implementation and demonstration of Transaction and Concurrency control techniques using locks.	02	LO6

Lab Objectives:						7		

# Lab Objectives:

Sr. No.	Lab Objectives
The Lab	experiments aims:
1	Understand data abstraction and object orientation
2	Design and implement declarative programs in functional and logic programming languages
3	Introduce the concepts of concurrent program execution
4	Understand run time program management
5	Understand how to implement a programming solution using different programming paradigms
6	Learn to compare implementation in different programming paradigms.

# Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On suc	ccessful completion, of course, learner/student will be able to:	
1	Apply Object Oriented concepts in C++.	L1, L2, L3
2	Design and Develop solution based on declarative programming paradigm using functional and logic programming using Haskell.	L6
3	Understand the multithreaded programs in Java and C++	L1, L2
4	Understand the need and use of exception handling and garbage collection in	L2, L3

	C++ and JAVA	
5	Design and Develop a solution to the same problem using multiple paradigms.	L6
6	Compare the implementations in multiple paradigms at coding and execution level	L4

# Prerequisite: C Programming

## Hardware & Software Requirements:

Hardware & Software Requirements:	
Hardware Requirement:	Software requirement:
PC i3 processor and above	Any SQL Compiler, Java Programming Language
DETAILED SYLLABUS:	

Sr.	Module	Detailed Content	Hours	LO
Sr. No.	Module	Detailed Content	nours	Mapping
190.				wiapping
0	Prerequisite	Demonstrate Compilation and interpretation stages to	02	
		students for C, C++, JAVA along with how to debug		
		the code.		
Ι	Imperative	At least two Programming Implementations	05	LO1
	Paradigm: Data	Preferably in C++ to demonstrate concepts like -		
	Abstraction in	Encapsulation, Inheritance, Initialization and		
	Object Orientation	Finalization, Dynamic Binding.		
II	Declarative	<ul> <li>Installation and starting Haskell compiler.</li> </ul>	06	LO2
	Programming	• Try the simple exercise on operators, types etc.		
	Paradigm:	• Consider a function safetail that behaves in the		
	Functional	same way as tail, except that safetail maps the		
	Programming	empty list to the empty list, whereas tail gives an		
		error in this case. Define safetail using: (a) a		
		conditional expression; (b) guarded equations; (c)		
		pattern matching. Hint: the library function null ::		
		[a]-> Bool can be used to test if a list is empty.		
		<ul> <li>Simple List Comprehension</li> </ul>		
		Recursion Function		
		<ul> <li>Higher-Order Functions</li> </ul>		
		• Using recursion and the function add, define a		
		function that multiplies two natural numbers.		
		• Implement the game of nim in Haskell, where the		
		rules of the game are as follows: The board		
		comprises five rows of stars: 1:****		
		2:****		
		3:***		
		4:**		
		5:*		
		Two players take it turn about to remove one or		
		more stars from the end of a single row.		

III	Declarative Programming Paradigm: Logic	<ul> <li>The winner is the player who removes the last star or stars from the board.</li> <li>Hint: Represent the board as a list of five integers that give the number of stars remaining on each row. For example, the initial board is [5,4,3,2,1].</li> <li>The Fibonacci sequence 0, 1, 1, 2, 3, 5, 8, 13, 21, 34,starts with 0 and 1, with each further number being the sum of the previous two. Using a list comprehension, define an expression fibs :: [Integer] that generates this infinite sequence.</li> <li>Students should implement tic-tac-toe or simple calculator to clearly understand the syntax and the execution of the Functional Implementation using Haskell language.</li> <li>Tutorial Introduction to SWI Prolog</li> <li>Implement at least five Prolog programs to understand declarative programming concepts.</li> </ul>	05	LO2
	Programming	Students should clearly understand the syntax and the execution of the Prolog code Implementation.		
IV	Alternative Paradigms: Concurrency	At least two Programs preferably in c++ and java to demonstrate Thread management and synchronization	02	LO4
V	Run Time Program Management	A Program to understand Exception handling and Garbage collection, preferably in C++ and JAVA Students should underline the syntactic differences in the solutions in both Object Oriented Languages.	02	LO4
VI	Programming Assignment For comparative study of Different Paradigms	At Least two implementations each implemented on multiple paradigms like procedural, object oriented, functional, logic. The implementations should be done in a group of two/three students with appropriate difficulty level. Student should present the solution code and demonstrate execution for alternative solutions they build.	04	LO5, LO6

ITL304	Java Lab (SBL)					25	25 50
Lab Objectives:							

# Lab Objectives:

Sr. No.	Lab Objectives
The Lab	experiments aims:
1	To understand the concepts of object-oriented paradigm in the Java programming language.
2	To understand the importance of Classes & objects along with constructors, Arrays ,Strings and vectors
3	To learn the principles of inheritance, interface and packages and demonstrate the concept of reusability for faster development.
4	To recognize usage of Exception Handling, Multithreading, Input Output streams in various applications
5	To learn designing, implementing, testing, and debugging graphical user interfaces in Java using Swings and AWT components that can react to different user events.
6	To develop graphical user interfaces using JavaFX controls.

# Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On su	ccessful completion, of course, learner/student will be able to:	1
1	Explain the fundamental concepts of Java Programing.	L1, L2
2	Use the concepts of classes, objects, members of a class and the relationships among them needed for a finding the solution to specific problem.	L3
3	Demonstrate how to extend java classes and achieve reusability using Inheritance, Interface and Packages.	L3
4	Construct robust and faster programmed solutions to problems using concept of Multithreading, exceptions and file handling	L3
5	Design and develop Graphical User Interface using Abstract Window Toolkit and Swings along with response to the events.	L6

## Prerequisite: Basics of Computer Programming

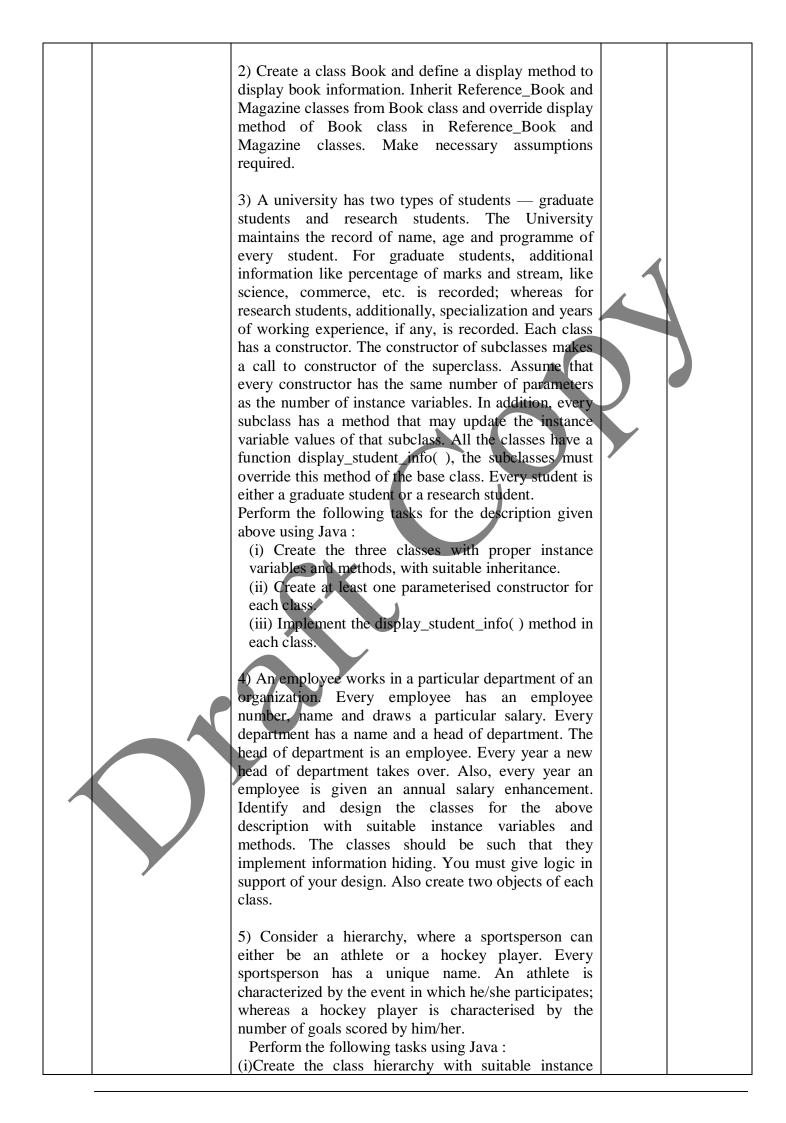

## Hardware & Software Requirements:

Hardware Requirements	Software Requirements	Other Requirements
PC With Following	1. Windows or Linux Desktop OS	1. Internet Connection for
Configuration	2. JDK 1.8 or higher	installing additional packages if
1. Intel PIV Processor	3. Notepad ++	required
2. 2 GB RAM	4.JAVA IDEs like Netbeans or	
3. 500 GB Harddisk	Eclipse	
4. Network interface card	_	

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	Prerequisite	Basics of Computer Programming.	02	-
Ι	Java Fundamentals	<ul> <li>Overview of procedure and object oriented Programming, Java Designing Goals and Features of Java Language.</li> <li>Introduction to the principles of object-oriented programming: Classes, Objects, Abstraction, Encapsulation, Inheritance, Polymorphism.</li> <li>Keywords, Data types, Variables, Operators, Expressions, Types of variables and methods.</li> <li>Control Statements: If Statement, If-else, Nested if, switch Statements: for loop, while loop, and do- while loop</li> <li>(Perform any 2 programs that covers Classes, Methods, Control structures and Looping statements)</li> <li>1) Implement a java program to calculate gross salary &amp; net salary taking the following data.</li> <li>Input: empno, empname, basic Process:</li> <li>DA=70% of basic</li> <li>HRA=30% of basic</li> <li>CCA=Rs240/- PF=10% of basic</li> <li>PT= Rs100/-</li> <li>2) Five Bikers Compete in a race such that they drive at a constant speed which may or may not be the same as the other. To qualify the race, the speed of a racer must be more than the average speed of all 5 racers.</li> <li>Write a Java program to take as input the speed of each racer and print back the speed of qualifying racers.</li> <li>3) Write a Java program that prints all real solutions to the quadratic equation ax<sup>2</sup>+bx+c = 0. Read in a, b, c and use the quadratic formula. If the discriminate b<sup>2</sup>-</li> </ul>	07	LO1

		<ul> <li>4ac is negative, display a message stating that there are no real solutions?</li> <li>4) Write a Menu driven program in java to implement simple banking application. Application should read the customer name, account number, initial balance, rate of interest, contact number and address field etc. Application should have following methods. <ol> <li>createAccount()</li> <li>deposit()</li> <li>withdraw()</li> <li>computeInterest()</li> <li>displayBalance()</li> </ol> </li> <li>5)Write a menu driven Java program which will read a number and should implement the following methods <ol> <li>factorial()</li> <li>testArmstrong()</li> <li>testPalindrome()</li> <li>testPrime()</li> <li>fibonacciSeries()</li> </ol> </li> <li>Create a Java based application to perform various ways of Method overloading.</li> </ul>		
II	Classes, objects, Arrays and Strings	Classes & Objects: Reference Variables, Passing parameters to Methods and Returning parameters from the methods, Static members, Non-Static members Nested and Inner Classes. Static Initialization Block(SIB), Instance Initialization-Block(IIB) Constructors: Parameterized Constructors, chaining of constructor, finalize() Method, Method overloading, Constructors Overloading. Recursion, Command-Line Arguments. Wrapper classes, InputBufferReader, OutputBufferReader, String Buffer classes, String functions. Arrays & Vectors: One and Two Dimensional arrays, Irregular arrays, dynamic arrays, Array List and Array of Object. (Perform any 3 programs that covers Classes & objects, Constructors, Command Line Arguments, Arrays/Vectors,String function and recursions). Experiments: 1) Write a program that would print the information (name, year of joining, salary, address) of three employees by creating a class named 'Employee'. The output should be as follows: Name Year of joining Address Robert 1994 64C-WallsStreat	07	LO1 LO2
		Robert199464C- WallsStreatSam200068D- WallsStreatJohn199926B- WallsStreat2) Write a program to print the area of a rectangle by creating a class named 'Area' having two methods.First method named as 'setDim' takes length and breadth of rectangle as parameters and the second		

r	r			· · · · · · · · · · · · · · · · · · ·
		method named as 'getArea' returns the area of the		
		rectangle. Length and breadth of rectangle are entered		
		through keyboard.		
		3) Write a Java program to illustrate Constructor		
		Chaining.		
		4) Create a class 'Student' with three data members		
		which are name, age and address. The constructor of		
		the class assigns default values name as "unknown",		
		age as '0' and address as "not available". It has two		
		members with the same name 'setInfo'. First method		
		has two parameters for name and age and assigns the		
		same whereas the second method takes has three		
		parameters which are assigned to name, age and		
		address respectively. Print the name, age and address		
		of 10 students. Hint - Use array of objects.		
		5) Write a java programs to add n strings in a vector		
		array. Input new string and check whether it is present		
		in the vector. If it is present delete it otherwise add it to		
		the vector.		
		6) Print the sum, difference and product of two		
		complex numbers by creating a class named 'Complex'		
		with separate methods for each operation whose real		
		and imaginary parts are entered by user.		
		7)Write menu driven program to implement recursive		
		Functions for following tasks.		
		a) To find GCD and LCM		
		b) To print n Fibonacci numbers		
		c) To find reverse of number		
		d) To solve $1 + 2+3+4++(n-1)+n$		
		8) Print Reverse Array list in java by writing our own		
		function		
III	Inheritance,	Inheritance: Inheritance Basics, Types of Inheritance	10	LO1
	Packages and	in Java, member access, using Super- to call superclass		LO3
	Interfaces.	Constructor, to access member of super class(variables		
		and methods), creating multilevel hierarchy,		
		Constructors in inheritance, method overriding,		
		Abstract classes and methods, using final, Dynamic		
		Method Dispatch		
		<b>Packages</b> : Defining packages, creating packages and		
		<sup>*</sup> Importing and accessing packages Interfaces: Defining implementing and extending		
		<b>Interfaces</b> : Defining, implementing and extending interfaces, variables in interfaces, Default Method in		
		Interfaces, variables in interfaces, Default Method in Interface, Static Method in interface, Abstract Classes		
		vs Interfaces.		
		(Perform any 3 programs covering Inheritance,		
		Interfaces and Packages).		
		Experiments		
		P • • • • • • • • • • • • • • • •		
		1) Create a Teacher class and derive Professor/		
		Associate_Professor/Assistant_Professor class from		
			1	
		Teacher class. Define appropriate constructor for all		
		Teacher class. Define appropriate constructor for all the classes. Also define a method to display		
		the classes. Also define a method to display		

		<ul> <li>variables and methods.</li> <li>(ii) Create a suitable constructor for each class.</li> <li>(iii) Create a method named display_all_info with suitable parameters. This method should display all the information about the object of a class.</li> <li>(iv) Write the main method that demonstrates polymorphism.</li> <li>6) Create an interface vehicle and classes like bicycle, car, bike etc, having common functionalities and put all the common functionalities in the interface. Classes like Bicycle, Bike, car etc implement all these functionalities in their own class in their own way</li> <li>7) Create a class "Amount In Words" within a user defined package to convert the amount into words.</li> </ul>		
IV	Exception Handling, Multithreading, Input Output streams	(Consider amount not to be more than 100000). Exception Handling: Exception-Handling Fundamentals, Exception Types, Exception class Hierarchy, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java's Built-in Exceptions, Creating Your Own Exception Subclasses Multithreaded Programming: The Java Thread Model and Thread Life Cycle, Thread Priorities, Creating a Thread, Implementing Runnable, Extending Thread, Creating Multiple Threads, Synchronization: Using Synchronized Methods, The synchronized Statement I/O Streams: Streams, Byte Streams and Character, The Predefined Streams, Reading Console Input, Reading Characters, Reading Strings, Writing Console Output, Reading and Writing Files. (Perform any 3 programs that cover Exception Handling, Multithreading and I/O Streams). Experiments:	10	LO1 LO3 LO4
		<ol> <li>Write java program where user will enter loginid and password as input. The password should be 8 digit containing one digit and one special symbol. If user enter valid password satisfying above criteria then show "Login Successful Message". If user enter invalid Password then create InvalidPasswordException stating Please enter valid password of length 8 containing one digit and one Special Symbol.</li> <li>Java Program to Create Account with 1000 Rs Minimum Balance, Deposit Amount, Withdraw Amount and Also Throws LessBalanceException. It has a Class Called LessBalanceException Which returns the Statement that Says WithDraw Amount(_Rs) is Not Valid. It has a Class Which Creates 2 Accounts, Both Account Deposite Money and One Account Tries to WithDraw more Money</li> </ol>		

V       GUI         v       GUI         programming-1       Rester of the state of the sta					
<ul> <li>vern number and another will print odd number in an ordered fashion.</li> <li>4) Assume that two brothers, Joe and John, share a common bank account. They both can, independently, read the balance, make a deposit, and withdraw some money. Implement java application demonstrate how the transaction in a bank can be carried out concurrently.</li> <li>5) You have been given the list of the names of the files in a directory. You have to select Java files from them. A file is a Java file if i's name ends yoth "java". For e.g. File. "Names java" is a Java file, "FileNames.java.pdf" is not. #### Term Work:

The Term work shall consist of at least 15 practical based on the above list. The term work Journal must include at least 2 Programming assignments. The Programming assignments should be based on real world applications which cover concepts from more than one modules of syllabus.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments/tutorial/write up) + 5 Marks (Attendance)

#### Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

ITM301	Mini Project – 1 A for Front end /backend Application using JAVA					25	25	50

# **Course Objectives**

- 1. To acquaint with the process of identifying the needs and converting it into the problem.
- 2. To familiarize the process of solving the problem in a group.
- 3. To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
- 4. To inculcate the process of self-learning and research.

### Course Outcome: Learner will be able to...

- 1. Identify problems based on societal /research needs.
- 2. Apply Knowledge and skill to solve societal problems in a group.
- 3. Develop interpersonal skills to work as member of a group or leader.
- 4. Draw the proper inferences from available results through theoretical/ experimental/simulations.
- 5. Analyse the impact of solutions in societal and environmental context for sustainable development.
- 6. Use standard norms of engineering practices
- 7. Excel in written and oral communication.
- 8. Demonstrate capabilities of self-learning in a group, which leads to life long learning.
- 9. Demonstrate project management principles during project work.

# **Guidelines for Mini Project**

- Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
- Students hall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
- A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during mini project activity; however, focus shall be on self-learning.

- Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
- Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
- With the focus on the self-learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. i.e. Mini Project 1 in semester III and IV. Similarly, Mini Project 2 in semesters V and VI.
- However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case by case basis.

#### **Guidelines for Assessment of Mini Project: Term Work**

- The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.
- Distribution of Term work marks for both semesters shall be as below;
  - Marks awarded by guide/supervisor based on log book : 10
  - Marks awarded by review committee

:10

• Quality of Project report

:05

Review/progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines. One-year project:

- In first semester entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on presentation given by students group.
  - First shall be for finalisation of problem
  - Second shall be on finalisation of proposed solution of problem.

In second semester expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester.

- First review is based on readiness of building working prototype to be conducted.
- Second review shall be based on poster presentation cum demonstration of working model in last month of the said semester.

# Half-year project:

- In this case in one semester students' group shall complete project in all aspects including,
  - Identification of need/problem
  - Proposed final solution
  - Procurement of components/systems
  - Building prototype and testing
  - Two reviews will be conducted for continuous assessment,
    - First shall be for finalisation of problem and proposed solution
    - Second shall be for implementation and testing of solution.

#### Assessment criteria of Mini Project.

Mini Project shall be assessed based on following criteria;

- 1. Quality of survey/ need identification
- 2. Clarity of Problem definition based on need.
- 3. Innovativeness in solutions
- 4. Feasibility of proposed problem solutions and selection of best solution
- 5. Cost effectiveness
- 6. Societal impact
- 7. Innovativeness
- 8. Cost effectiveness and Societal impact
- 9. Full functioning of working model as per stated requirements
- 10. Effective use of skill sets
- 11. Effective use of standard engineering norms
- 12. Contribution of an individual's as member or leader
- 13. Clarity in written and oral communication
- In **one year, project**, first semester evaluation may be based on first six criteria's and remaining may be used for second semester evaluation of performance of students in mini project.
- In case of **half year project** all criteria's in generic may be considered for evaluation of performance of students in mini project.

### **Guidelines for Assessment of Mini Project Practical/Oral Examination:**

- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organisations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

Mini Project shall be assessed based on following points;

- 1. Quality of problem and Clarity
- 2. Innovativeness in solutions
- 3. Cost effectiveness and Societal impact
- 4. Full functioning of working model as per stated requirements
- 5. Effective use of skill sets
- 6. Effective use of standard engineering norms
- 7. Contribution of an individual's as member or leader
- 8. Clarity in written and oral communication

**Pre-requisite:** Engineering Mathematics-I, Engineering Mathematics-II, Engineering Mathematics-III, Binomial Distribution.

#### **Course Objectives:**

Sr. No.	Course Objectives
The cour	se aims:
1	Matrix algebra to understand engineering problems
2	Line and Contour integrals and expansion of a complex valued function in a power
	series.
3	Z-Transforms and Inverse Z-Transforms with its properties.
4	The concepts of probability distributions and sampling theory for small samples.
5	Linear and Non-linear programming problems of optimization.
-	

# **Course Outcomes:**

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On suc	cessful completion, of course, learner/student will be able to:	
1	Apply the concepts of eigenvalues and eigenvectors in engineering problems.	L1, L2, L3
2	Use the concepts of Complex Integration for evaluating integrals, computing residues & evaluate various contour integrals.	L3
3	Apply the concept of Z- transformation and inverse in engineering problems.	L1,L2,L3
4	Use the concept of probability distribution and sampling theory to engineering problems.	L3
5	Apply the concept of Linear Programming Problems to optimization.	L1, L2, L3
6	Solve Non-Linear Programming Problems for optimization of engineering problems.	L3

Module	Detailed Contents	Hours	CO Mapping
	<ul> <li>Module: Linear Algebra (Theory of Matrices)</li> <li>1.1 Characteristic Equation, Eigenvalues and Eigenvectors, and properties (without proof)</li> <li>1.2 Cayley-Hamilton Theorem (without proof), verification and reduction</li> </ul>		
01	of higher degree polynomials 1.3 Similarity of matrices, diagonalizable and non-diagonalizable matrices	6	CO1
	Self-learning Topics: Derogatory and non-derogatory matrices, Functions of Square Matrix, Linear Transformations, Quadratic forms.	4	
	<ul> <li>Module: Complex Integration</li> <li>2.1 Line Integral, Cauchy's Integral theorem for simple connected and multiply connected regions (without proof), Cauchy's Integral formula (without proof).</li> <li>2.2 Taylor's and Laurent's series (without proof).</li> <li>2.3 Definition of Singularity, Zeroes, poles of <i>f</i>(<i>z</i>), Residues, Cauchy's Residue Theorem (without proof)</li> <li>Self-learning Topics: Application of Residue Theorem to evaluate real integrations.</li> </ul>	7	CO2
	<ul> <li>Module: Z Transform</li> <li>3.1 Definition and Region of Convergence, Transform of Standard Functions:</li> <li>{k<sup>n</sup>a<sup>k</sup>}, {a<sup> k </sup>}, {<sup>k+n</sup><sub>n</sub>C. a<sup>k</sup>}, {c<sup>k</sup>sin(ak + β)}, {c<sup>k</sup>sinh ak}, {c<sup>k</sup> cosh ak}.</li> <li>3.2 Properties of Z Transform: Change of Scale, Shifting Property, Multiplication, and Division by k, Convolution theorem.</li> <li>3.3 Inverse Z transform: Partial Fraction Method, Convolution Method.</li> <li>Self-learning Topics: Initial value theorem, Final value theorem, Inverse of Z Transform by Binomial Expansion</li> </ul>	5	CO3
	<ul> <li>Module: Probability Distribution and Sampling Theory</li> <li>4.1 Probability Distribution: Poisson and Normal distribution</li> <li>4.2 Sampling distribution, Test of Hypothesis, Level of Significance, Critical region, One-tailed, and two-tailed test, Degree of freedom.</li> <li>4.3 Students' t-distribution (Small sample). Test the significance of mean and Difference between the means of two samples. Chi-Square Test: Test of goodness of fit and independence of attributes, Contingency table.</li> <li>Self-learning Topics: Test significance for Large samples, Estimate parameters of a population. Vate's Correction.</li> </ul>	6	CO4
05	<ul> <li>parameters of a population, Yate's Correction.</li> <li>Module: Linear Programming Problems</li> <li>5.1 Types of solutions, Standard and Canonical of LPP, Basic and Feasible solutions, slack variables, surplus variables, Simplex method.</li> <li>5.2 Artificial variables, Big-M method (Method of penalty)</li> <li>5.3 Duality, Dual of LPP and Dual Simplex Method</li> </ul>	6	CO5

	Self-learning Topics: SensitivityAnalysis,Two-Phase Simplex Method,		
	Revised Simplex Method.		
	Module: Nonlinear Programming Problems		
	6.1 NLPP with one equality constraint (two or three variables) using the		
	method of Lagrange's multipliers		
	6.2 NLPP with two equality constraints		CO
06	6.3 NLPP with inequality constraint: Kuhn-Tucker conditions	6	COe
	Self-learning Topics: Problems with two inequality constraints,		
	Unconstrained optimization: One-dimensional search method (Golden		
	Search method, Newton's method). Gradient Search method

#### Term Work:

General Instructions:

- 1. Batch wise tutorials have to be conducted. The number of students per batch will be as per University pattern for practicals.
- 2. Students must be encouraged to write at least 6 class tutorials on the entire syllabus.
- 3. A group of 4-6 students should be assigned a self-learning topic. Students should prepare a presentation/problem solving of 10-15 minutes. This will be considered as a mini project in Engineering Mathematics. This project will be graded out of 10 marks depending on the performance of the students.

The distribution of Term Work marks will be as follows -

1. Attendance (Theory and Tutorial)	05 marks
2. Class Tutorials on entire syllabus	10 marks
3. Mini project	10 marks

#### Assessment:

#### **Internal Assessment (IA) for 20 marks:**

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

#### > Question paper format

- 1. The question paper will comprise a total of 6 questions, each carrying 20 marks.
- 2. Out of the 6 questions, 4 questions have to be attempted.
- 3. Question 1, based on the entire syllabus, will have 4 sub-questions of 5 marks each and is compulsory.
- 4. Question 2 to Question 6 will have 3 sub-questions, each of 6, 6, and 8 marks, respectively.
- 5. Each sub-question in (4) will be from different modules of the syllabus.
- 6. Weightage of each module will be proportional to the number of lecture hours, as mentioned in the syllabus.

#### **Course Objectives:**

Sr. No.	Course Objectives						
The cour	se aims:						
1	Understand the division of network functionalities into layers.						
2	Understand the types of transmission media along with data link layer concepts, design issues and protocols						
3	Analyze the strength and weaknesses of routing protocols and gain knowledge about IP addressing						
4	Understand the data transportation, issues and related protocols for end to end delivery of data.						
5	Understand the data presentation techniques used in presentation layer & client/server model in application layer protocols.						
6	Design a network for an organization using networking concepts						
Course (	Outcomes:						

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On su	accessful completion, of course, learner/student will be able to:	
1	Describe the functionalities of each layer of the models and compare the Models.	L1
2	Categorize the types of transmission media and explain data link layer concepts, design issues and protocols.	L2, L3, L4
3	Analyze the routing protocols and assign IP address to networks.	L4
4	Explain the data transportation and session management issues and related protocols used for end to end delivery of data.	L1, L2
5	List the data presentation techniques and illustrate the client/server model in application layer protocols.	L1, L3
6	Use of networking concepts of IP address, Routing, and application services to design a network for an organization	L3

#### Prerequisite: PCOM

# **Course Objectives:**

Course	Objectives:
Sr. No.	Course Objectives
The cour	rse aims:
1	To learn fundamentals of Regular and Context Free Grammars and Languages.
2	To understand the relation between Regular Language and Finite Automata and machines.
3	To learn how to design Automata's as Acceptors, Verifiers and Translators.
4	To understand the relation between Regular Languages, Contexts free Languages, PDA and TM.
5	To learn how to design PDA as acceptor and TM as Calculators.
6	To learn applications of Automata Theory.
Course	Outcomes:

#### **Course Outcomes:**

Sr.	Course Outcomes	Cognitive levels
No.		of attainment as
		per Bloom's
		Taxonomy
On suce	cessful completion, of course, learner/student will be able to:	
1	Explain, analyze and design Regular languages, Expression and Grammars.	L2, L4, L6
2	Design different types of Finite Automata and Machines as Acceptor,	L6
	Verifier and Translator.	
3	Analyze and design Context Free languages and Grammars.	L4, L6
4	Design different types of Push down Automata as Simple Parser.	L6
5	Design different types of Turing Machines as Acceptor, Verifier, Translator	L6
	and Basic computing machine.	
6	Develop understanding of applications of various Automata.	L6

Prerequisite: Basic Mathematical Fundamentals: Sets, Logic, Relations, Functions.

#### Assessment:

#### Internal Assessment (IA) for 20 marks:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test
- Question paper format
  - Question Paper will comprise of a total of **six questions each carrying 20 marks Q.1** will be **compulsory** and should **cover maximum contents of the syllabus**
  - **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
  - A total of **four questions** need to be answered

# **Course Objectives:**

Course	Objectives:
Sr. No.	Course Objectives
The cour	se aims:
1	Learn the fundamentals of Digital Logic Design.
2	Conceptualize the basics of organizational and features of a digital computer.
3	Study microprocessor architecture and assembly language programming.
4	Study processor organization and parameters influencing performance of a processor.
5	Analyse various algorithms used for arithmetic operations.
6	Study the function of each element of memory hierarchy and various data transfer techniques used in digital computer.

# Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On suc	ccessful completion, of course, learner/student will be able to:	
1	Demonstrate the fundamentals of Digital Logic Design	L1, L2
2	Describe basic organization of computer, the architecture of 8086 microprocessor and implement assembly language programming for 8086 microprocessors.	L1
3	Demonstrate control unit operations and conceptualize instruction level parallelism.	L1, L2
4	List and Identify integers and real numbers and perform computer arithmetic operations on integers.	L1,L4
5	Categorize memory organization and explain the function of each element of a memory hierarchy.	L4
6	Examine different methods for computer I/O mechanism.	L3

Prerequisite: Basics of Electrical Engineering, Fundamentals of Computer.

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Basics of Electrical Engineering, Fundamentals of Computer	02	
Ι	Fundamentals of Logic Design	Number systems: Introduction to Number systems, Binary Number systems, Signed Binary Numbers, Binary, Octal, Decimal and Hexadecimal number and their conversions, 1's and 2's complement Combinational Circuits:	07	CO1
		NOT,AND,OR,NAND,NOR,EX-OR,EX-NOR Gates. Half & Full Adder and subtractor, Reduction of Boolean functions using K-map method (2,3,4 Variable), introduction to Multiplexers and		A
		Demultiplexers, Encoders & Decoders. Sequential Circuits: Introduction to Flip Flops: SR, JK, D, T, master slave flip flop, Truth Table.		
		Self-learning Topics: Number System, Quine- McCluskey, Flip-Flop conversion, Counter Design.		
II	Overview of Computer Architecture &	Introduction of Computer Organization and Architecture. Basic organization of computer and block level description of the functional units. Evolution of	08	CO2
	Organization	Computers, Von Neumann model. Performance measure of Computer Architecture, Amdahl's Law Architecture of 8086 Family, Instruction Set, Addressing Modes, Assembler Directives, Mixed-		
		Language Programming, Stack, Procedure, Macro. Self-learning Topics: Interfacing of I/O devices with 8086(8255, ADC, DAC).		
III	Processor Organization and Architecture	CPU Architecture, Instruction formats, basic instruction cycle with Interrupt processing. Instruction interpretation and sequencing. Control Unit: Soft wired (Microprogrammed) and hardwired control unit design methods. Microinstruction sequencing and execution. Micro operations, concepts of nano programming.	07	CO3
		Introduction to parallel processing concepts, Flynn's classifications, instruction pipelining, pipeline hazards. <b>Self-learning Topics</b> : Study the examples on instruction pipelining for practice.		
IV	Data Representation and Arithmetic Algorithms	Booth's algorithm. Division of integers: Restoring and non-restoring division, signed division, basics of floating-point representation IEEE 754 floating point (Single & double precision) number representation.	04	CO4
		<b>Self-learning Topics:</b> Implement Booth's Algorithm and Division methods.		
V	Memory Organization	Introduction to Memory and Memory parameters. Classifications of primary and secondary memories. Types of RAM and ROM, Allocation policies, Memory hierarchy and characteristics. Cache memory: Concept, architecture (L1, L2, L3), mapping techniques. Cache Coherency, Interleaved and Associative memory	07	CO5

		<b>Self-learning Topics:</b> Case study on Memory Organization, Numerical on finding EAT, Address mapping.		
VI	I/O Organization	Input/output systems, I/O module-need & functions	04	CO6
		and Types of data transfer techniques: Programmed		
		I/O, Interrupt driven I/O and DMA		
		Self-learning Topics: Comparison of all I/O		
		methods.

Lab Objec	Lab Objectives:						

# Lab Objectives:

Sr. No.	Lab Objectives					
The Lab	experiments aims:					
1	To get familiar with the basic network administration commands					
2	To install and configure network simulator and learn basics of TCL scripting.					
3	To understand the network simulator environment and visualize a network topology and observe its performance					
4	To implement client-server socket programs.					
5	To observe and study the traffic flow and the contents of protocol frames.					
6	To design and configure a network for an organization					
Lab Out	Lab Outcomes:					

#### Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On succ	essful completion, of course, learner/student will be able to:	
1	Execute and evaluate network administration commands and demonstrate their use in different network scenarios	L3, L5
2	Demonstrate the installation and configuration of network simulator.	L1, L2
3	Demonstrate and measure different network scenarios and their performance behavior.	L1, L2
4	Implement the socket programming for client server architecture.	L3
5	Analyze the traffic flow of different protocols	L4
6	Design a network for an organization using a network design tool	L6

# Prerequisite: C /Java

Hardware Requirement:	Software requirement:
PC i3 processor and above	NS2.34, Protocol Analyzer ( eg. Wireshark), C/Java/python

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	Prerequisite	Programming Language (C/Java),	02	-
		Basic commands of windows and Unix/Linux operating system. editor commands (eg nano/vi editor etc)		
Ι	Fundamentals of Computer Network	<ul> <li>Understanding Basic networking Commands: ifconfig ,ip, traceroute, tracepath, ping, netstat, ss, dig, nslookup, route, host, arp, hostname, curl or wget, mtr, whois, tcpdump</li> <li>Execute and analyze basic networking commands.</li> </ul>	02	LO1
II	Basics of Network simulation	<ul> <li>Installation and configuration of NS2.</li> <li>Installation to Tcl Hello Programming</li> <li>Installation and configuring of NS-2 simulator and introduction to Tcl using Hello program</li> </ul>	02	LO2
III	Simulation of Network Topology with different Protocols	<ul> <li>Implementation of Specific</li> <li>Network topology with respect to <ol> <li>Number of nodes and physical layer configuration</li> <li>Graphical simulation ofnetwork with RoutingProtocols(Distance Vector/ Link State Routing) and trafficconsideration (TCP, UDP)using NAM.</li> <li>Analysis of networkperformance for quality ofservice parameters such aspacket-delivery-ratio, delayand throughput</li> <li>Comparative analysis of routing protocols with respect to QOS parametersusing Xgraph/gnuplot fordifferent load conditions.</li> <li>Write TCL scripts to create topologies. Create and run traffics and analyze the result using NS2</li> <li>Write TCL scripts for topology with Graphical simulation of traffic consideration (TCP, UDP)</li> </ol> </li> </ul>	06	LO3 LO5
- BV		<ul> <li>using NAM and plot the graph</li> <li>Implement distance vector and link state routing protocols in NS2.</li> </ul>	04	1.04
IV	Socket Programming	<ul><li>Socket Programming with C/Java/python</li><li>1. TCP Client, TCP Server</li><li>2. UDP Client, UDP Server</li></ul>	04	LO4
		<ul> <li>To study and Implement Socket Programming using TCP.</li> </ul>		
		• To study and Implement Socket Programming		

		using UDP		
V	Protocol Analyzer	<ol> <li>Study of various Network Protocol Analyzer Tools likeWireshark, tcpdump, Windump, Microsoft Message Analyzer, Ettercap, Nirsoft SmartSniff etc.</li> <li>Install one of the Network protocol analyzer tools and analyze the traffic</li> <li>Study various network protocol analyzer tools and analyze the network traffics using one of the network protocol analyzer tools.</li> </ol>	04	LO5
VI	Network Design	<ul> <li>Network Design for an organization using the following concepts: <ol> <li>Addressing (IP Address Assignment),</li> <li>Naming (DNS)</li> <li>Routing</li> </ol> </li> <li>Perform remote login using Telnet Server</li> <li>Design a network for an organization using the concepts of Addressing (IP Address Assignment), Naming (DNS) and Routing. Also mention the internetworking devices used</li> </ul>	06	LO6

#### Lab Objectives:

Sr. No.	Lab Objectives					
The Lab	experiments aims:					
1	To understand architecture and installation of Unix Operating System					
2	To learn Unix general purpose commands and programming in Unix editor environment					
3	To understand file system management and user management commands in Unix.					
4	To understand process management and memory management commands in Unix					
5	To learn basic shell scripting.					
6	To learn scripting using awk and perl languages.					
Lab Outcomes:						

#### Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On suc	cessful completion, of course, learner/student will be able to:	
1	Understand the architecture and functioning of Unix	L1, L2
2	Identify the Unix general purpose commands	L4
3	Apply Unix commands for system administrative tasks such as file system management and user management.	L3
4	Execute Unix commands for system administrative tasks such as process management and memory management	L4
5	Implement basic shell scripts for different applications.	L3
6	Implement advanced scripts using awk & perl languages and grep, sed, etc. commandsfor performing various tasks.	L3

# **Prerequisite:** Programming Language C

Hardware Requirement:	Software requirement:
PC i3 processor and above	Unix, Editor, Bash shell, Bourne shell and C shell

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	Prerequisite	Basic Programming Skills, Concepts of Operating System	02	-
Ι	Introduction to Unix	Case Study: Brief History of UNIX, Unix Architecture; Installation of Unix Operating System	03	LO1
II	Basic Commands	<ul> <li>a) Execution of Unix General Purpose Utility Commands like echo, clear, exit, date, time, uptime, cal, cat, tty, man, which, history, id, pwd, whoami, ping, ifconfig, pr, lp, lpr, lpstat, lpq, lprm, cancel, mail, etc.</li> <li>b) Working with Editor Vi/other editor.</li> </ul>	03	LO2
III	Commands for File System Management and User Management	<ul> <li>a) Study of Unix file system (tree structure), file and directory permissions, single and multiuser environment.</li> <li>b) Execution of File System Management Commands like 1s, cd, pwd, cat, mkdir, rmdir, rm, cp, mv, chmod, wc, piping and redirection, grep, tr, echo, sort, head, tail, diff, comm, less, more, file, type, wc, split, cmp, tar, find, vim, gzip, bzip2, unzip, locate, etc.</li> <li>c) Execution of User Management Commands like who, whoami, su, sudo, login, logout, exit, passwd, useradd/adduser, usermod, userdel, groupadd, groupmod, groupdel, gpasswd, chown, chage, chgrp, chfn, etc.</li> </ul>	04	LO3
IV	Commands for Process Management and Memory Management	<ul> <li>a) Execution of Process Management Commands like ps, pstree, nice, kill, pkill, killall, xkill, fg, bg, pgrep, renice, etc.</li> <li>b) Execution of Memory Management Commands like free, /proc/meminfo, top, htop, df, du, vmstat, demidecode, sar, pagesize, etc.</li> </ul>	04	LO4
V	Basic Scripts	<ul> <li>a) Study of Shell, Types of Shell, Variables andOperators</li> <li>b) Execute the following Scripts (at least 6): <ul> <li>(i) Write a shell script to perform arithmetic operations.</li> <li>(ii) Write a shell script to calculate simple interest.</li> <li>(iii) Write a shell script to determine largest among three integer numbers.</li> <li>(iv) Write a shell script to determine a given year is leap year or not.</li> </ul> </li> </ul>	04	L02, L03, L05

	1		······
		(v) Write a shell script to print multiplication table of given number using while statement.	
		(vi) Write a shell script to search whether element is	
		present is in the list or not.	
		(vii) Write a shell script to compare two strings.	
		(viii) Write a shell script to read and check if the	
		directory / file exists or not, if not make the	
		directory / file.	
		(ix) Write a shell script to implement menu-driven	
		calculator using case statement.	
		(x) Write a shell script to print following pattern:	
		*	
		**	
		* * * * *	
		(xi) Write a shell script to perform operations on directory like: display name of current directory;	
		display list of directory contents; create another	
		directory, write contents on that and copy it to a	
		suitable location in your home directory; etc.	T
X / T			1.02
VI	Advanced Scripts	a) Execute the following scripts using grep / sed 06 commands:	LO2,
			L03, L06
		(i) Write a script using grep command to find the	LUU
		number of words character, words and lines in a	
		file.	
		(ii) Write ascriptusing egrep command to display list	
		of specific type of files in the directory. (iii) Write a script using sed command to replace all	
		occurrences of particular word in given a file.	
		(iv) Write a script using sedcommand to print	
		duplicated lines in input.	
		b) Execute the following scripts using awk / perl	
		languages:	
		(i) Write an awk script to print all even numbers in	
		a given range.	
		(ii) Write an awk script to develop a Fibonacci series	
		<ul><li>(take user input for number of terms).</li><li>(iii) Write a perl script to sort elements of an array.</li></ul>	
		(iv) Write a perl script to check a number is prime or	
		not.

ITL403	Microprocessor Lab					25	25	50

# Lab Objectives:

Sr. No.	Lab Objectives
The Lab	experiments aims:
1	Learn assembling and disassembling of PC
2	Design, simulate and implement different digital circuits
3	Get hands on experience with Assembly Language Programming.
4	Study interfacing of peripheral devices with 8086 microprocessor.
5	Realize techniques for faster execution of instructions and improve speed of operation and performance of microprocessors.
6	Write and debug programs in TASM/MASM/hardware kits

#### Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On succ	cessful completion, of course, learner/student will be able to:	
1	Demonstrate various components and peripheral of computer system	L2
2	Analyze and design combinational circuits	L4, L6
3	Build a program on a microprocessor using arithmetic & logical instruction set of 8086.	L3
4	Develop the assembly level programming using 8086 loop instruction set	L6
5	Write programs based on string and procedure for 8086 microprocessor.	L1
6	Design interfacing of peripheral devices with 8086 microprocessor.	L6

**Prerequisite:** Logic Design, Programming Languages(C, C++)

#### Hardware & Software Requirements:

NOTE: Programs can be executed on assembler or hardware boards.

#### Hardware Requirement:

- Motherboard, RAM, Processor, Connectors, Cables, SMPS, HDD, Monitor, Graphics card (optional), and Cabinet.
- 8086 microprocessor experiment kits with specified interfacing study boards

#### Software requirement:

- Microsoft Macro Assembler (TASM)/Turbo Assembler (TASM)
- Virtual simulator lab.
- Proteus design suite

#### Term Work:

The Term work shall consist of at least 15 practical based on the above list. The term work Journal must include at least 2 Programming assignments. The Programming assignments should be based on real world applications which cover concepts from more than one modules of syllabus.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments/tutorial/write up) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

Course Code	Course	Teaching (Contact				its Assigned			
	Name	Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total

ITM401	Mini Project – 1 B for Python based automation projects					25	25	50

# **Course Objectives**

- 1. To acquaint with the process of identifying the needs and converting it into the problem.
- 2. To familiarize the process of solving the problem in a group.
- 3. To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
- 4. To inculcate the process of self-learning and research.

### Course Outcome: Learner will be able to...

- 1. Identify problems based on societal /research needs.
- 2. Apply Knowledge and skill to solve societal problems in a group.
- 3. Develop interpersonal skills to work as member of a group or leader.
- 4. Draw the proper inferences from available results through theoretical/ experimental/simulations.
- 5. Analyse the impact of solutions in societal and environmental context for sustainable development.
- 6. Use standard norms of engineering practices
- 7. Excel in written and oral communication.
- 8. Demonstrate capabilities of self-learning in a group, which leads to life long learning.
- 9. Demonstrate project management principles during project work.

# **Guidelines for Mini Project**

- Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
- Students hall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
- A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during mini project activity; however, focus shall be on self-learning.

- Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
- Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
- With the focus on the self-learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. i.e. Mini Project 1 in semester III and IV. Similarly, Mini Project 2 in semesters V and VI.
- However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case by case basis.

#### **Guidelines for Assessment of Mini Project: Term Work**

- The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.
- Distribution of Term work marks for both semesters shall be as below;
  - Marks awarded by guide/supervisor based on log book : 10
  - Marks awarded by review committee

:10

• Quality of Project report

: 05

Review/progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines. One-year project:

- In first semester entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on presentation given by students group.
  - First shall be for finalisation of problem
  - Second shall be on finalisation of proposed solution of problem.
  - In second semester expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester.
    - First review is based on readiness of building working prototype to be conducted.
    - Second review shall be based on poster presentation cum demonstration of working model in last month of the said semester.

# Half-year project:

- In this case in one semester students' group shall complete project in all aspects including,
  - Identification of need/problem
  - Proposed final solution
  - Procurement of components/systems
  - Building prototype and testing
  - Two reviews will be conducted for continuous assessment,
    - First shall be for finalisation of problem and proposed solution
    - Second shall be for implementation and testing of solution.

# Assessment criteria of Mini Project.

Mini Project shall be assessed based on following criteria;

- 1. Quality of survey/ need identification
- 2. Clarity of Problem definition based on need.
- 3. Innovativeness in solutions
- 4. Feasibility of proposed problem solutions and selection of best solution
- 5. Cost effectiveness
- 6. Societal impact
- 7. Innovativeness
- 8. Cost effectiveness and Societal impact
- 9. Full functioning of working model as per stated requirements
- 10. Effective use of skill sets
- 11. Effective use of standard engineering norms
- 12. Contribution of an individual's as member or leader
- 13. Clarity in written and oral communication
- In **one year, project**, first semester evaluation may be based on first six criteria's and remaining may be used for second semester evaluation of performance of students in mini project.
- In case of **half year project** all criteria's in generic may be considered for evaluation of performance of students in mini project.

# **Guidelines for Assessment of Mini Project Practical/Oral Examination:**

- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organisations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

Mini Project shall be assessed based on following points;

- 1. Quality of problem and Clarity
- 2. Innovativeness in solutions
- 3. Cost effectiveness and Societal impact
- 4. Full functioning of working model as per stated requirements
- 5. Effective use of skill sets
- 6. Effective use of standard engineering norms
- 7. Contribution of an individual's as member or leader
- 8. Clarity in written and oral communication
