LIVE INTERACTIVE SESSION WITH TRAINER

GROUP DISCUSSION AND PRESENTATION SKILLS

STAGES OF WOMEN EMPOWERMENT

CONCEPT

When the sensor detects motion, the Raspberry Pi camera takes a photo. After that, the Pi sends a request to OpenALPR with the car photo to be identified. Then, the OpenALPR API returns the car details like: plate number, model, color, and the confidence of the results.

After identifying a car, we'll do some verifications, and if we found an authorized car, we'll trigger an event (that can be open the garage or led, for example). The following image contains a flowchart showing the process.
